

Welcome

Buckinghamshire & Milton Keynes
Local Nature Recovery Strategy
Cross Sector Workshop

The Environment Act 2021 requires all areas in England to produce a Local Nature Recovery Strategy.

The purpose of the LNRS is to:

- Restore and enhance nature across England
- Propose practical actions to achieve nature recovery
- Direct where funding would be best spent on nature
- Link with Biodiversity Net Gain, a new planning requirement
- Encourage more coordinated and practical action for nature

- **48 LNRs** will cover the whole of England
- Locally-led by “**Responsible Authorities**”
- Updated **every 5 years**
- The new Government has announced ensuring **Nature Recovery as one of its top 5 priorities** for the environment.

The slide features decorative geometric shapes in the corners. The top right corner has overlapping triangles in shades of brown and grey. The bottom left corner has overlapping triangles in shades of yellow and gold.

Buckinghamshire Council
Responsible Authority

Milton Keynes City Council
Natural England
Supporting Authorities

Bucks & Milton Keynes NEP
Project management

There are two key parts to the Local Nature Recovery Strategy:

- Biodiversity Statement
- Local Habitats map

Public Engagement

- February / March 2024: Stakeholder Engagement Workshops
 - July / August 2024: Open Survey
 - **November 2024: Cross Sector Workshop**
 - January / February 2025: Public Consultation
- 

We are here today to:

- Build understanding of the LNRS - what it is, what hopes to achieve
- Share story, process and findings so far
- Sense check critical aspects of the LNRS before it goes out to public consultation
- Begin to build understanding across sectors as a way to support action on nature recovery

Morning Session

Sector specific findings from LNRS stakeholder engagement

How the LNRS has been created

Sense checking the themes priorities and actions in the LNRS

Break

Introducing the LNRS digital habitats map

Q+A / Responses to questions submitted at workshop sign up

Lunch

Afternoon Session

Preparing the ground for an LNRS Action Network

Plenary

Optional Networking

Findings from LNRS sector-based workshops

Sector Representatives

Development Sector Jo Alden, Barret David Wilson Homes

Environmental Orgs Dr Helen Read, Burnham Beeches & Stoke Common

Town and Parish Councils Mel Woof, Association of Local Town and Parish Councils

Community / General Public Adrian Porter, Wild Amersham

Business Chris Bridgman, Gardens in the Sky

Farmers, Landowners and Foresters Peter Hobbs, Rectory Farm

Sector-based workshops March /April 2024

1. Which pressures on nature are most important to address in this area?
2. Which benefits of nature should we invest in for the future?
3. What are your priorities for nature recovery?
4. What are your asks of the LNRS?

“Investing in nature is our obligation. We believe you will always get out more than you put in”

Development Sector

'It's very hard to do any of this on your own.'
Environmental Organisations

'There's more going on than you might imagine'

Town and Parish Councils

'A great opportunity for joined up thinking'

Community / General Public

'A lot of businesses want to invest in nature but just don't know how to go about it'

Businesses

'We want to do more for nature...and it has to make economic sense.'

Farmers, Landowners and Foresters

In twos or threes on your table, please share:

- Something that stood out for you from the sector feedback
 - A nature recovery achievement that you are proud of
- 
- The bottom of the slide features a decorative graphic consisting of several overlapping, semi-transparent geometric shapes. On the left, there are two light blue shapes. In the center, there is a darker blue shape. On the right, there is a yellowish-green shape. These shapes are arranged in a way that they appear to be layered, creating a modern, abstract design.

Sense checking the critical aspects of the LNRS:

- The **priorities** for nature recovery that are specific to Buckinghamshire and Milton Keynes
- The **measures** we can take to achieve them

Measures = Actions

What does the LNRS consist of?

Stepped process for production of LNRS

Bucks and MK Natural Environment Partnership commissioned to lead production of LNRS

✓ Step 3 – draft complete

We are here

Stakeholder Engagement Process

Event	Purpose
10 Sector-based Workshops 150 attendees	March–April 2024 , (6 sectors) To identify stakeholders’ priorities for nature and nature benefits, and any corresponding measures To understand the format requirements for the LNRS documents. Youth Summit (40 respondents)
Survey 444 respondents	July/August 2024 ; To reach a wider audience to check the proposed shortlisted LNRS themes derived from the stakeholder engagement workshops. To fill any gaps and gain additional information regarding “ other plans and strategies ” that may have a bearing upon the LNRS.
Multisector Event	18th Nov, 2024 Cross–sector dialogue to discuss the proposed mapped opportunities and priorities for nature that would comprise the LNRSs Local Habitat Map. Also to test functionality of the draft LNRS maps.

Step 1: Map Areas of Particular Importance for Biodiversity

LNRS Irreplaceable Habitats

- Ancient Tree Inventory (Woodland Trust)
- Lowland Fens

Ancient Woodland © Natural England

- Ancient & Semi-Natural Woodland
- Ancient Replanted Woodland
- Ancient Wood Pasture

National Conservation Sites

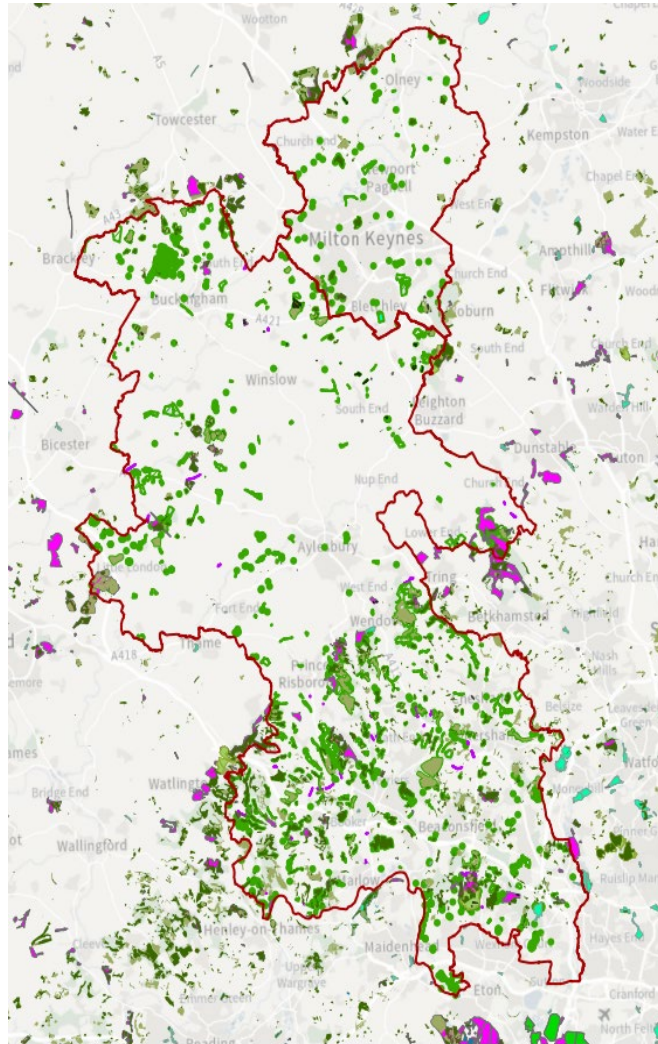

- National Nature Reserves (England)
- Sites of Special Scientific Interest (England) © Natural England
- Special Areas of Conservation (England)
- Special Protection Areas (England)

Local Conservation Sites

- Local Nature Reserves (England) © Natural England

Local Sites

- Local Wildlife Sites
- Road Verge Nature Reserves

Step 3: Describe the Strategy Area, its biodiversity and opportunities for recovery

Variety of landscapes, habitats and

Change over recent decades

Important species

Opportunities for nature recovery

Challenges facing nature

Step 4: Priorities and Measures

Priorities - Objectives for nature recovery in relation to habitats, species or the wider environment

Measures - Practical **actions** to achieve the priorities

Priorities and Measures: Ideas from...

Important species – specialist input

Stakeholder workshops
6 sectors, 147 participants

Environmental plans and
strategies

Bucks Youth Summit

FINAL SHORTLIST:
3 tiers:
9 Themes
20 Priorities
115 Measures

Themes arising from the priorities and measures process

THEMES
1) Protect, create, enhance and restore Land-based habitats
2) Improve rivers, their floodplains and the quality of their waters
3) Protect, create, increase, enhance and maintain wetland habitats
4) More farmers and rural land managers to adopt wildlife-friendly land management practices and take action to improve soil health
5) Improve biodiversity in built-up areas.
6) Create connections between green areas for wildlife to flourish
7) Manage the effects of a changing climate
8) Tackling non-native invasive species, pests and diseases
9) Improve the environment for target species

THEMES arising from Priorities shortlisting	#	PRIORITY DESCRIPTION
THEME 1: Protect, create, increase, enhance and restore land-based habitats	1	Protect, create, increase, enhance and restore trees and woodland habitats
	2	Protect, create, increase, enhance and restore hedgerows and field margins
	3	Protect, create, increase, enhance and restore species-rich grasslands
	4	Protect, create and improve, restore and connect chalk and limestone grassland
	5	Protect, create and improve traditional orchards, open mosaic habitats, Biodiversity Opportunity Areas and other important sites
	6	Reduce recreational pressure on irreplaceable, priority and other important habitats
THEME 2: Improve rivers, their floodplains and the quality of their waters	7	Renaturalise river habitats using appropriate habitat restoration techniques (to) and enhance the ecological value of river corridors and their floodplains
	8	Improve river water quality
	9	Protect, enhance and restore chalk streams
THEME 3: Protect, create, increase, enhance and maintain wetland habitats.	10	Protect, create, enhance, restore and connect existing ponds, rivers, lakes and lagoons to create a diversity of wetlands and pond sizes and depths to maximise and increase biodiversity
THEME 4: More Farmers and rural land managers to adopt wildlife-friendly land management practices and take action to improve soil health	11	Farm businesses and rural landholdings enhance and create connected and diverse wildlife-rich habitats across the landscape as an integral part of their businesses, recognising the importance of wildlife for pollination, crop and soil and water health.
	12	Improve soil health by increasing micro-organisms, animals and plants living within the soil, improve soil structure and increase organic matter. This will increase soil fertility, water retention, lock up carbon, and reduce the need for chemical fertilisers and pesticides.
THEME 5: Improve biodiversity in built-up areas	13	Manage existing green and blue spaces in built-up areas better for wildlife
	14	Create more space for nature when designing new development
	15	Provide habitats for nature along and around infrastructure such as roads, railways and airports
THEME 6: Create connections between green areas for wildlife to flourish	16	Connect habitats to make wildlife corridors and stepping stones at landscape scale
THEME 7: Manage the effects of a changing climate	17	Use nature to capture carbon and weaken climate change
	18	Adopt nature-based solutions to address climate change impacts, water management and improve air quality
THEME 8: Tackle non-native species, pests & diseases	19	Reduce and prevent the spread of non-native invasive species, pests and diseases which can occur in high densities to the detriment of a broader range of wildlife.
THEME 9: Improve the environment for important species	20+	tbc - species work-dependent

Each priority contains a number of measures (practical actions)

PRIORITY 8: Improve river water quality	M46 (not mapped)	<p>Incorporate permeable surfaces and other Sustainable urban Drainage Systems techniques within urban areas to filter pollutants before they enter river systems.</p> <p>This will help improve water quality reducing the impact of flooding and pollution on wildlife, as well as reducing flooding risk, improve water quality, and support groundwater recharge.</p> <p><i>For example, rain gardens and rainwater harvesting</i></p>	Direct
	M47 (mapped)	<p>Increase the area of woodlands where they can intercept the flow of surface run-off of water and capture sediment to improve water quality in rivers.</p> <p>This reduces the impact of pollution on wildlife.</p>	Direct
	M48 (not mapped)	<p>Water companies to consider building artificial wetlands to treat wastewater, remove pollutants and provide habitat for wildlife.</p> <p>This will aid their required rapid progress in the implementation of measures and improvements to meet their Environment Programme requirements as set by the Environment Agency and agreed by Ofwat. The measure would help to address water quality pressures arising from treated sewage effluent and failing/under-capacity sewerage infrastructure.</p>	Supporting
	M49 (not mapped)	<p>Encourage volunteers to help monitor water quality so that decisions are made based on up-to-date data.</p> <p>Support citizen science initiatives to add to existing baselines and monitor water quality, integrate these data sets with other data collection activities (research and regulatory) and to incorporate this data into decisions to inform water quality improvement measures and to identify diffuse sources or water quality pressures</p>	Supporting

Step 5 – Local Habitat Maps

**FINAL Priorities and
Measures SHORTLIST:**

9 Themes
20 Priorities
115 Measures
for nature recovery

35 mapped
measures

**LNRS Local
habitat map**
(Step 5)

Jim Rouquette

Habitat basemap

Detailed habitat basemap produced by classifying every land parcel (>2.5M) using a range of local and national datasets

Habitats

- Arable
- Uncertain agriculture
- Amenity grassland
- Improved grassland
- Marshy grassland
- Semi-natural grassland
- Fen, marsh and swamp
- Broadleaved woodland
- Coniferous woodland
- Mixed woodland
- Scrub
- Trees / Parkland
- Heathland
- Water
- Garden
- Built-up areas and infrastructure
- Rock, exposure and waste
- Mixed / other / uncertain
- Unclassified

0.0 5.0 10.0 15.0 km

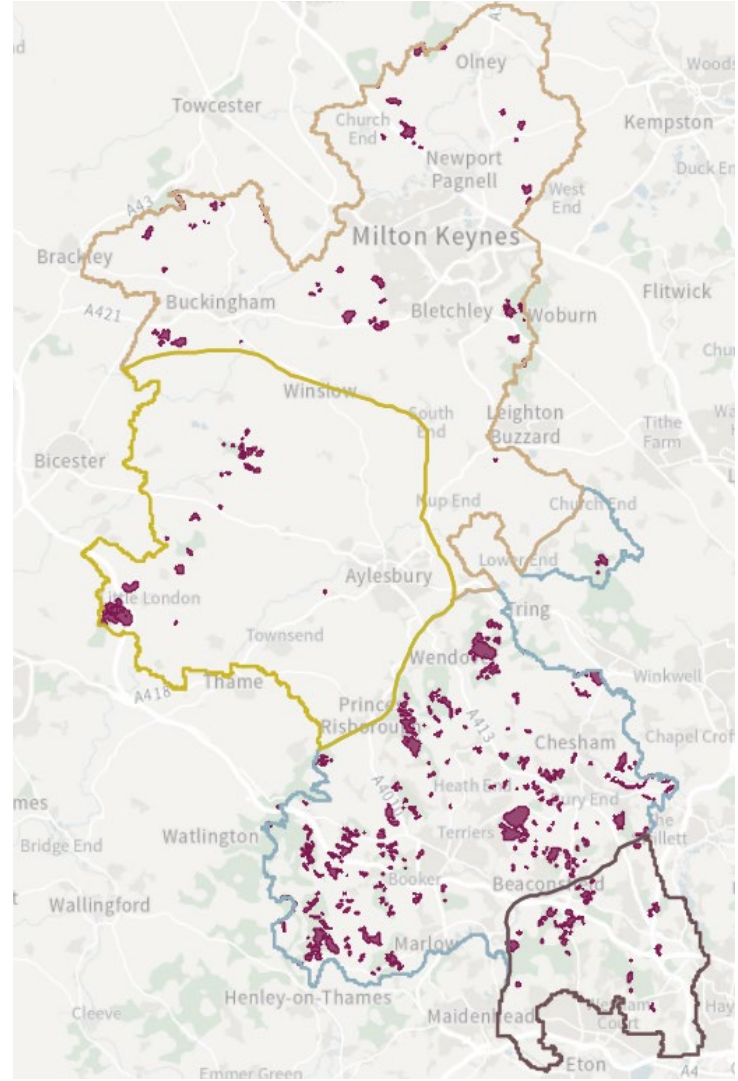

Mapping measures 1: Restore / enhance / manage existing sites

Identified existing habitat features
from the basemap or other data
sources

Example: M3

Sensitively convert plantations on
ancient woodland sites (PAWS)
back to native broad-leaved
woodlands where appropriate.

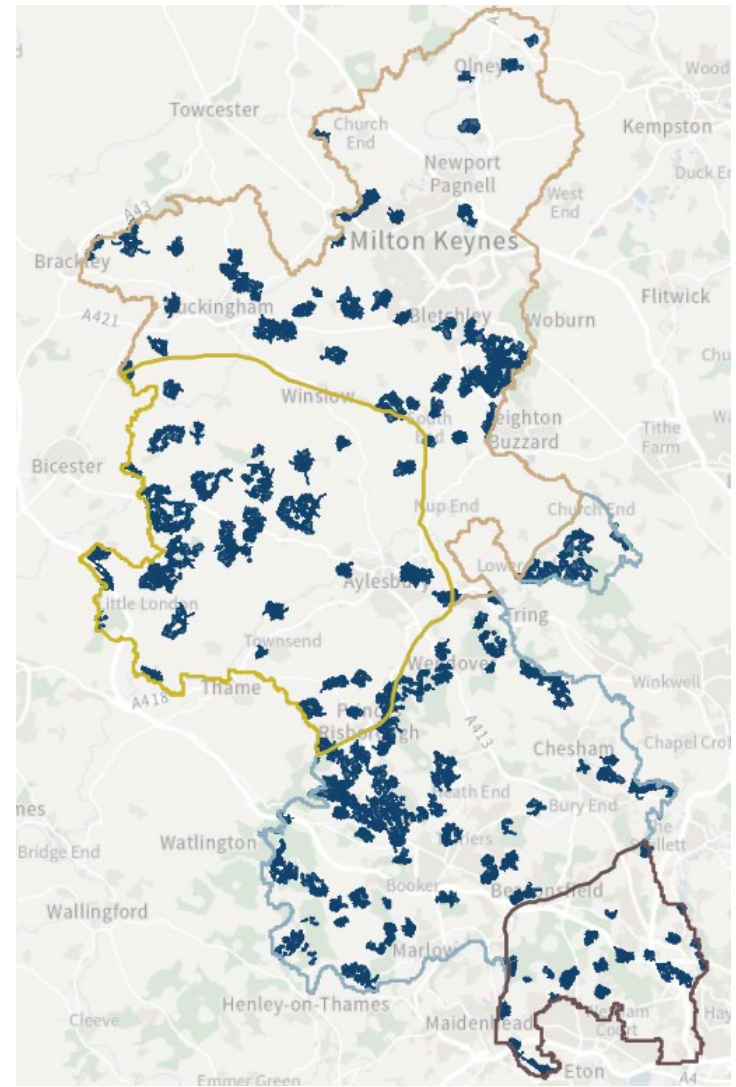

Mapping measures 2: Create new habitats

Used opportunity mapping to map the best locations to expand and connect habitats, taking constraints (e.g. buildings and infrastructure, existing high quality habitats) into account.

Also mapped opportunities to enhance provision of ecosystem services e.g. water quality and air quality enhancement.

Example: M18

Create new species-rich grasslands (where possible to expand, buffer or connect existing species-rich grassland) and restore historical/remnant grassland areas.

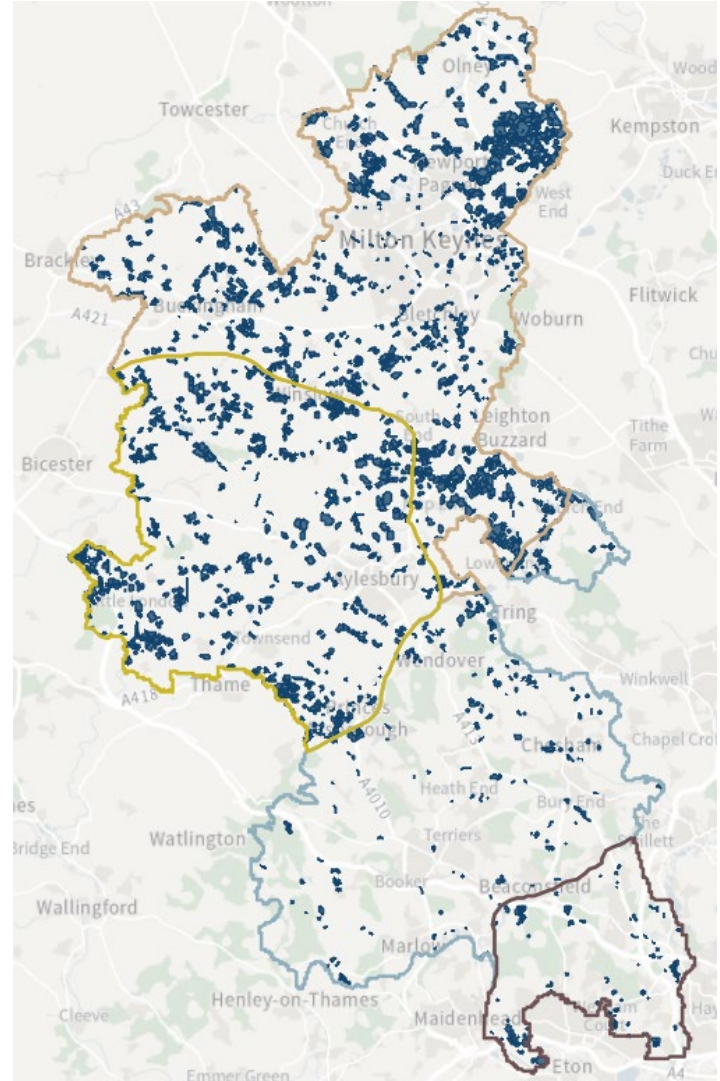

Mapping measures 3: Prioritising locations

Prioritisation applied to some individual layers where large areas were identified, based on:

- Areas that expand the highest quality sites
- Size thresholds
- Delivery of additional benefits

Example: M47

Increase the area of woodlands where they can intercept the flow of surface run-off of water and capture sediment to improve water quality in rivers.

Help ⓘ

[Priorities and Measures ⓘ](#)

[Story Map ⓘ](#)

The map displays the boundaries of the Buckinghamshire & Milton Keynes Local Nature Recovery Strategy (LNRS) in orange. Overlaid on this are various zones and themes: Areas of Particular Importance to Biodiversity (APIB) in blue, and nine different themes (THEME 1-9) in various shades of green and yellow. The map includes a search bar, navigation controls, and a scale bar (10 km). The legend on the right lists the following layers:

- LNRS zones
- Areas of Particular Importance to Biodiversity (APIB)
- THEME 1: Protect, create, increase, enhance and restore land-based habitats
- THEME 2: Improve rivers, their floodplains and the quality of their waters
- THEME 3: Protect, create, increase, enhance and maintain wetland habitats
- THEME 4: More Farmers and rural land managers to adopt wildlife-friendly land management practices and take action to improve soil health
- THEME 5: Improve biodiversity in built-up areas
- THEME 7: Manage the effects of a changing climate
- THEME 9: Improve the environment for important species

Sense checking the priorities and measures (actions) for nature recovery

- Some are mapped
- Some are un-mappable

Activity 1

Q : What would you focus on first + why?

A : BLUE POST-ITS and GOLD STARS

Activity 2

Q: What is already working well in relation to this priority and group of measures (actions)?

A: GREEN POST ITS

Q: What might be the greatest challenges?

A: PINK POST ITS

Activity 3

Q: Will the actions achieve the priorities?

A: Yes, GREEN / Maybe, ORANGE / No, RED

Place dots on map key to signal response

Add notes with YELLOW post its.

Activity 4

Q: Are the Priorities and Measures (actions) clear, do they give you enough information to know what to do?

A: STAR based review and anything you would like to say, written on back

Please visit other tables and leave your comments using post-its
